Art Unit: 1744

## **DETAILED ACTION**

# Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 2. Claims 1,3-6,8,11, are rejected under 35 U.S.C. 103(a) as being unpatentable over USP 5,583,045 (Finn).

Finn discloses a compost curing device which includes an aeration apparatus comprising fans (36), a pvc air conduit (32), vertically arranged, and connected to an air diffuser in the form of a planar floor (10).

The prior art article does not specify the flow capacity of the air blower. However, the article does recognize the relationship between the amount of oxygen available and the growth and viability of the aerobic microorganisms. The courts have ruled that "[W]here the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation."

Art Unit: 1744

In re Aller, 220 F.2d 454, 456, 105 USPQ 233, 235 (CCPA 1955). Accordingly, the claimed flow rates are considered to be obvious.

5. Claims 1,2,4,5,7,9-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over USP 5,417,736 (Meyer).

The Meyer patent discloses an aeration apparatus which includes an air blower (20) connected to a section of rigid vertical tubing (16) and further connected to air diffusers (14) consisting of perforated plastic tubing. The reference differs from the claims in that the blower (20) is positioned on the ground and not positioned in the air. The court has held the mere change in position of an element of a device without a corresponding change in operation is not patentable. In re Japikse, 181 F.2d 1019, 86 USPQ 70 (CCPA 1950) (Claims to a hydraulic power press which read on the prior art except with regard to the position of the starting switch were held unpatentable because shifting the position of the starting switch would not have modified the operation of the device.

The patent is silent as to the tubing being coiled shaped. In re Dailey, 357 F.2d 669, 149 USPQ 47 (CCPA 1966) (The court held that the configuration of the claimed disposable plastic nursing container was a matter of choice which a person of ordinary skill in the art would have found obvious absent persuasive evidence that the particular configuration of the claimed container was significant.). In the absence of persuasive evidence that the shape of the diffuser is significant, the feature is considered to be obvious.

Art Unit: 1744

Page 4

The prior art article does not specify the flow capacity of the air blower. However, the article does recognize the relationship between the amount of oxygen available and the growth and viability of the aerobic microorganisms. The courts have ruled that "[W]here the general conditions of a claim are disclosed in the prior art, it is not inventive to discover the optimum or workable ranges by routine experimentation." In re Aller, 220 F.2d 454, 456, 105 USPQ 233, 235 (CCPA 1955). Accordingly, the claimed flow rates are considered to be obvious.

### Response to Arguments

- 6. Applicant's arguments filed 8/23/2004 have been fully considered but they are not persuasive.
- a) Applicant's argument concerning the unobviousness of modifying the flow rate of the system disclosed in Ingram to that claimed is persuasive and the rejection has been withdrawn.
- b) Concerning the prior art rejection in view of USP 5,583,045 (Finn), applicant asserts that the air flow system in Finn is materially different and patentably distinct from the system claimed. The examiner disagrees, and that taken together the plenum and air floor constitute the "air diffuser" claimed by applicant. The plenum (14) and air floor (10) in Finn are structurally equivalent to the diffuser shown in figure 5.

Art Unit: 1744

Page 5

c) In response to applicant's argument that the device in USP 5,417,736 (Myer) is directed to composting solid waste and not to processing liquid compost tea, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See *In re Casey*, 152 USPQ 235 (CCPA 1967) and *In re Otto*, 136 USPQ 458, 459 (CCPA 1963).

#### Conclusion

7. This application contains claims 15 and 16 are drawn to an invention nonelected with traverse in Paper filed 1/8/2004. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144)

See MPEP § 821.01.

DAVID A. REDDING RIMARY EXAMINED Art Unit: 1744

8. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to David A Redding whose telephone number is 571-272-1276. The examiner can normally be reached on Mon.-Fri. 6:00 - 3:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Warden can be reached on 571-272-1281. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
